

MPUR 2019 Conference Prospectus

Executive Summary

The Multiphase Pump User Roundtable (MPUR) is an industry leading conference for sharing learnings and generating discussion exclusively on topics associated with multiphase pumping. For the past 20 years, MPUR is the only conference solely focused on multiphase pumping. MPUR has a strong technical focus provided by the active participation of the Distinguished Advisory Board Petroleum ETC assemble for the conference. The conference is based on end-user presentations and features strong end-user leadership in discussion/technology panel sessions, and overall quality of the conference. Historically, our MPUR conferences are the first to receive landmark case histories and the latest field-trail and testing results; often years before they appear in traditional oil & gas conferences and journals. MPUR is supported by the leading multiphase pump equipment suppliers whose active involvement brings discussion on the latest emerging technologies.

Petroleum ETC and the Distinguished Advisory Board has set our sights on diving deeper into cross team disciplinary roles. Respectfully we present your technical tracks for decision makers in the oil and gas upstream sector. On May 9, 2019 MPUR – IOR & EOR technical tracks will provide the technology for interesting subjects. The timing of the conference is during OTC week. Petroleum ETC will provide all the coordination, program development and advertising for the event. MPUR – IOR & EOR will be a one-day event. To allow time for organization of the conference we would like to have a commitment from Board Members no later than February 28th, 2019. This will allow us to begin advertising and build support for the conference. Here's the details you will need to make your decisions on how to get involved.

Technical Tracks and Case Histories anticipated for MPUR in 2019

MPUR 2019 Conference Prospectus

MPUR Theme

Connecting Decision Makers with tools, technology and new ideas to implement for a sustainable portfolio.

This year's conference has many bright new ideas, but better than that we have proven technology that will increase efficiency and effectiveness of your teams. Digital transformation and AI have unlocked value for many years to come. Are you taking full advantage of what they offer? At MPUR we attract top talent not only in multiphase technology, but to enhance your production and increase your reserves. We will deliver education and foster supreme discussions on the proposed topics throughout the conference. You can choose which track best fits your liking or explore new ideas and new technology. While horizontal wells are riskier and more expensive than conventional vertical wells, the production gains may be worth it. This conference teaches you when the technology justifies the risk.

MPUR Attendee Profile

The Multiphase Pump User Roundtable is an interactive forum, emphasizing case study examples and field-proven technologies. By engaging, and sometimes challenging the speakers, audience members play a crucial role in facilitating the exchange of information. Brief, PowerPoint presentations help speakers set the stage, but it is the extended, interactive discussions that tease out and explore critical issues. The typical attendee has a background in C-Suite executives, Mechanical Engineer, Flow Assurance, Pre-Projects, SURF, Architectural Project Manager, Facilities, Reservoir/Production Engineer, Completions, and Data Science engineers. Advisory Members experience range from experts to those having a baseline understanding of the specific issues being address in each session. Not only does this interactive format bring the presentation material into better focus, it also ensures the program content is responsive to the needs of each participant.

Work Plan

The following milestones are proposed to develop MPUR

2019 Event Structure	Oct	Nov	Dec	Jan	Feb	March	April	May
Planning Meeting	9, 29	2,9,14	11,17	15,31	13,28	20	3,30	3
Abstracts Due				31				
Sponsor Solicitation		2			28			
Early Registration		15			28			
Marketing Campaign				17				9
Presentations Due							24	6
Speaker Dinner								8
MPUR – EOR & IOR								9
Reception								5PM

Abstract Call Begins November 5th and must be submitted on/or by January 31st, 2019.

Send a short description for a chance to share your results and technology that is a contributor to implementing a sustainable portfolio for all Decision Makers to consider.

MPUR 2019 Conference Prospectus

Founded in 1999 by Dr Stuart L Scott, the **Multiphase Pump User Roundtable (MPUR) Conference** has played a key role in raising awareness and fostering interaction in the evolving area of multiphase pumping. This conference is held Thursday during the Offshore Technology Conference (OTC) in Houston. For 2019 this will be a special event as we celebrate the 21st annual MPUR Conference.

MPUR-Europe Conference has a focus on applications in pumping technologies related to seafloor, offshore-topside, North Sea and onshore. The 6th MPUR-Europe conference in September 2019. This event has been held in Amsterdam, Paris, Oslo and The Hague in previous years.

We embark on the journey to South America 8th annual conference in 2020. Will you join us to hear about the latest in emerging technology in South America's offshore deepwater projects or all the rave in ESPs, multiphase metering and artificial lift technologies.
