

Abstract Deadline: November 28th, 2019

MPUR | 2020 Mid-Spring in Italy - Presenter Guidelines & Review Process

MPUR Theme: **Collaboration to Accelerate Learning and Adoption**

Pumping has stood the test of time providing value to the international oil and gas industry. Our industry's market for Improved Oil Recovery (IOR), Artificial Lift and Multiphase Fluid Transport is growing with pumping continuing to lead the way. With multiphase pumping applications are increasing, both offshore and onshore, the MPUR highlights both the lessons learned and key emerging technology developments. Collaboration and learning from others are the theme for this year's event. MPUR was created to foster interaction and the exchange of experiences between end-user of multiphase pumping. This leads to quicker and cost-effective adoption of multiphase pumping to increase recoveries, boost production rates and, in some cases, even enable developments to proceed. Furthermore, we have seen multiphase pumping used to reduce and even eliminate flaring. Our traditional strong emphasis on end-user presentations will be demonstrated at this year's event as well as robust and efficient technologies and new standards and evaluation policies. The goal is to build a foundation for stronger understanding of the developments and accomplishments in multiphase pumping.

Abstract format:

1. End-User presenter strongly suggested
2. 200-300-word description of technical findings and key points from lessons learned
3. Point of contact information on abstract and title of abstract

We appreciate your support and participation in this event and look forward to celebrating our 8th Anniversary with you.

Sincerely,

Amanda Scott
President of Petroleum ETC
