

## Multiphase User Pump Roundtable, Goes to Italy!

### Introduction to Multiphase Pump User Roundtables

Dr. Stuart L Scott founded in 1999 the Multiphase Pump User Roundtable (MPUR). MPUR has played a crucial role in raising awareness and fostering interaction in the evolving area of multiphase pumping. This event has been before or during the Offshore Technology Conference (OTC) in Houston. For 2020 this will be a special event as we celebrate the 8th annual MPUR in Europe.

PetroleumETC's events are attended by engineers, managers, researchers, and industry thought-leaders in the upstream oil & gas business. Typically, attendance splits between end-users, equipment suppliers and researchers. Our events are of interest to engineering disciplines such as production, process, facilities, rotating equipment, and electrical. Due to the strategic nature of the presentations and discussion, our events are also well attended by development/operations managers, project team leaders and members of integrated development/venture teams, including reservoir engineers.

### Multiphase Pump User Roundtable History

THEME

Collaboration to Accelerate Learning and Adoption

Technical papers anticipated for MPUR include: Strongly suggested Case-Histories be given by End-User Only

- Twin-Screw Multiphase Pumping Applications – Real effects on production, environmental impacts and economics
- Subsea Boosting – New emerging technology; Real effects of efficiency and effectiveness to economics
- New Uses of the Multiphase Pump Technology in Brownfield Applications
- Seafloor Wet-Gas Compression
- Multiphase Gas Separation
- Control Systems – Digitalization
- Onshore Twin-Screw Pump Applications (middle East and Africa)
- Transportation of liquids
- Barrier Fluid System Solutions
- Commissions & Standardization

### Multiphase Pump User Roundtable in Milan, Italy

MPUR is an industry leading formula for sharing learnings and generating discussion exclusively on topics associated with multiphase pumping. MPUR is the only event solely focused on multiphase pumping with a strong technical focus provided by the active participation of the Advisory Board PetroleumETC assembles for the event. Historically, our MPUR events are the first to receive historic case histories and the latest field-trial and testing results; often years before they appear in oil & gas conferences and journals. MPUR is supported by the leading multiphase pump equipment suppliers whose active involvement brings the discussion on the latest emerging technologies.

#### Please consider the following details as a sponsor for this one day, MPUR Roundtable:

- Sponsorship benefits of \$8,000 USD - \$3,000 USD is requested
- Benefits will include light breakfast and lunch, cocktail reception
- An Advisory Board membership depending on sponsorship level to plan/finalize all details of the event.
- Provide a mechanism for sponsoring to distribute literature to attendees via table-top exhibits in the coffee break area
- Social Media Shot-Outs
- Provide a list of registered persons to you one week before the event
- Logo added to the event webpage with hyper link to your company's website
- Company Specific Discount Code
- Free registrations and discounted tickets
- Many more....

#### Responsibilities of PetroleumETC

- Provide an organization for the event, including the development of the technical program
- Organize the event Advisory Board
- Provided all advertising for the event
- Provide on-site coordination during the conference

We thank you for your consideration and look forward to including you in this interaction and exchange of experiences between end-users of multiphase pumping.
